

Danimex CLOUD PoC Service

In today's fast-paced world, where seamless communication is essential, building your own networks is no longer a necessity. That's where our solution comes in - Push-to-Talk over Cellular (PoC). Danimex PoC solution transforms your smartphone into a powerful Push-to-Talk (PTT) handset, enabling real-time communication, location tracking, and other services via cellular networks and Wi-Fi. With the dispatcher software, you can monitor and track devices, make individual or group calls, and send or receive text messages effortlessly. By opting for the Danimex hosted cloud solution, you eliminate the need to create and maintain your own network infrastructure. Enjoy global roaming capabilities without the hassle of building anything yourself. Simply subscribe, download the app, sign in, and you're ready to go - turning your smartphone into a virtual PTT radio network with ease.

Key features

GROUP AND PRIVATE CALLS

Full-duplex mode is supported for private calls to other mobile app users, dispatchers, SIP phones.

MULTIMEDIA MESSAGING

Send a text message, share a picture or short videos with other app users and dispatchers.

ONLINE STATUS AND MAPS

Bluetooth-based and GNSS tracking are supported. Adjustable polling interval. Mobile app users can see each other's location (configurable). Users' icons change color depending on the presence status.

EMERGENCY BUTTON

Press and hold to send a distress signal to other users.

VOICE RECORDING AND EVENT LOGGING

All voice calls, location history and other information are stored on the server. Voice recordings can also be stored on the smart device (configurable).

REQUEST-TO-TALK

Send a callback request to dispatchers if they are unavailable for a call now. The administrator can disable outgoing calls for one or more mobile app users.

SAFETY FEATURES

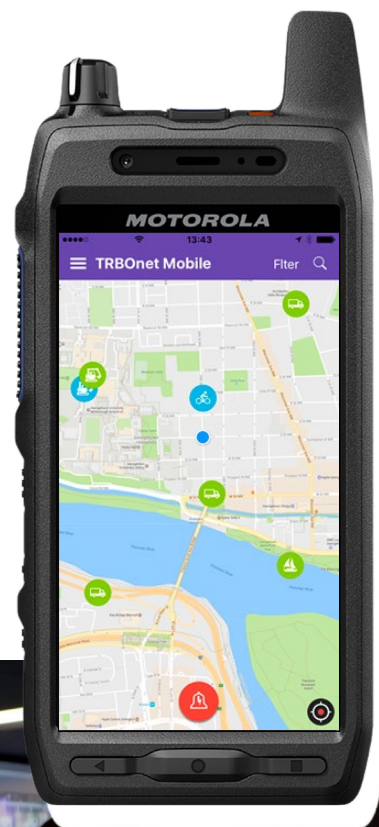

Man Down, Shake Detection (raise an alarm by shaking the device), No Movement. They can be enabled by the administrator or by the user (configurable).

SET CHANNELS MODE

A mobile device can be forced to listen to set channels and prevent the user from selecting other channels.
