

NETNode2x2W-5RM-175500T

NETNode IP Mesh Radio Phase 5 (Robust Tri-Band)

Overview:

Phase 5 is the latest generation of DTC's NETNode IP Mesh Radio family, offering built-in dual HD video encoders and MIMO capability, providing our highest ever data capacities and maximum frequency flexibility. The latest tri-band product offers increased frequency agility with support for high L-band, S-band and C-band, provided by one physical unit.

IP radios can be combined in a fluid self-forming, self-healing mesh network containing up to 144 nodes depending on operating mode. The tri-band radios exchange bidirectional IP data in a single RF channel, or can utilise different frequency channels for the uplink and downlink traffic, thereby, simplifying frequency management in a complex network.

The entire mesh can operate in bandwidths from 1.25MHz to 20MHz, employing DTC's unique COFDM modulation scheme. Multiple Input Multiple Output (MIMO) technology transmits two signals in the same channel, almost doubling the available data capacity, can also be configured in standard Mesh.
