

V500 Body Camera

Effortless connectivity. Reliable insights.

IN PUBLIC SAFETY, STAYING CONNECTED IS NECESSITY

The V500, an advanced body camera, offers reliable LTE, WiFi, and Bluetooth connectivity in an ergonomic design for optimal usability. It goes beyond a standard body camera, serving as a vital component in the Motorola Solutions public safety ecosystem.

This innovation enhances safety, transparency, and accountability globally, allowing you to efficiently leverage existing video, voice, and software investments for improved community operations.

FEATURES

Enhance your operational capabilities beyond body cameras by leveraging the complete Motorola Solutions portfolio. Connect officers to TETRA and APX radios via Bluetooth for automated recording, allowing remote scene monitoring. Back at the station, simultaneously review body-worn and in-car videos to construct comprehensive incident pictures for stronger cases.

- » **Radio Integration:** Streamline evidence capture and backup calls with a single button, triggered by emergency radio states.
- » **In-Car Video System Integration:** Manage body camera and in-car video footage in one backend software, synchronizing multiple perspectives of an event.
- » **Mobile Policing Application Integration:** Initiate evidential processes and eliminate manual duplication by tagging footage on smart devices within crime reporting workflows.
- » **Powerful Backend Software:** Optimize body camera footage by integrating it with in-car videos, external media, and metadata in a secure, easily shareable platform.

CAPTURE INCIDENTS EASILY

In critical situations, the V500 body camera allows you to focus on your job with confidence. Designed for reliability in the field, it offers rugged durability, ample storage, and configurable recording triggers. This ensures the safety of everyone while quickly capturing essential information in crystal-clear evidential video when needed.

ON-DEMAND OFFLOAD, LIGHTER WORKLOAD

Efficiently manage growing digital evidence with the V500. Accelerate evidentiary workflows as officers tag footage on the camera and send it immediately to the backend software. After shifts, swiftly offload remaining footage over gigabit ethernet for quick turnaround. Build your case sooner by obtaining footage over LTE in the field or utilizing the Smart Dock's rapid offload functionality at the shift's end.

UNDERSTAND EVENTS AS THEY UNFOLD

The V500's LTE connectivity keeps your officers connected anywhere. Compatible with any network carrier, it allows real-time monitoring, ensuring you have the information needed for informed decision-making by leveraging existing technological investments.
